PROPOSAL · 2026

AI Reply Automation

An intelligent system that reads every inbound reply to your Glopos campaign, classifies it, and either responds automatically — or prepares a ready-to-send draft for your review.

For **Navmatix · Tim Van den Eede**

By **Forecom Agency**

FORECOM

ABOUT

Forecom Agency

We are a growth services provider specialising in complex digitalisation, marketing, and sales process automation. With 5+ years on the market and a team of 40+ experts, we help B2B companies scale outreach and close more deals — without adding headcount.

For Navmatix, we run the Smartlead cold email infrastructure across 55 sending accounts. This proposal outlines how we extend that infrastructure with AI-driven reply handling.

Our advantages:

- 5 years on the market with proven B2B outreach results
- Unique combination of technical know-how and sales strategy
- Remote-first team of 40+ specialists across multiple verticals
- Own AI tooling built on top of Anthropic Claude infrastructure
- We grow our own revenue 100%+ year-over-year — we use what we sell

FORECOM

THE PROBLEM

Warm leads are going cold in your inbox

Your Smartlead campaign runs across 55 email accounts and generates consistent replies. But handling them manually — from a single forwarded inbox — isn't sustainable.

- Every reply gets forwarded to one inbox — volume is hard to triage manually at scale
- Not every reply deserves the same energy — but you can't tell at a glance without reading them all
- Delayed responses signal disinterest to warm prospects — reply speed directly impacts conversion
- Replying from the Smartlead master inbox breaks your personal outreach feel
- Hours spent on "not relevant" replies that could be handled automatically

FORECOM

THE SOLUTION

Three categories.
One automated pipeline.

The moment a reply lands in Smartlead, an AI reads the full thread, classifies the intent, and takes the right action — instantly.

CATEGORY A

Not Relevant

End users only, wrong person, unsubscribe requests, out-of-office replies

Auto-reply sent immediately. Polite, professional close. Lead removed from follow-up. You never see it.

CATEGORY B

Somewhat Relevant

Curious but unclear role, uses NTRIP internally, wants more information about Glopos

Auto-reply sent immediately. Light Glopos context, soft CTA. Keeps the door open without your effort.

CATEGORY C

Priority

Runs an RTK corrections service, operates a caster, wants to book a call, asks about Glopos features or migration

Draft created in your inbox. You receive a notification. Review 5 lines, hit Send. Done in 30 seconds.

FORECOM

YOUR EXPERIENCE

What this looks like for you, Tim

After a one-time setup, your daily interaction with incoming replies changes completely.

CATEGORIES A + B · AUTOMATIC

You do nothing.

The AI reads the reply, classifies it, and sends the appropriate response — all within seconds. **No action needed from you.** The reply goes out from your email, in your name, in your tone.

You can optionally review a weekly digest of what was sent, but there's no obligation to act on it.

CATEGORY C · 30 SECONDS

You get a notification.

When a high-priority reply arrives, you receive an email:

> *"Priority reply from Jan Novák at CzechGNSS — draft ready in your inbox."*

You open your email, read the prepared draft, make any edits you want, and hit **Send**. That's it. The AI has already done the work of writing a personalized, context-aware reply.

FORECOM

HOW WE START

Trial period — all drafts, zero auto-sends

Before the system sends anything automatically, we run a controlled trial. Every reply — across all three categories — is prepared as a draft first. You review, approve, and we calibrate.

DAYS 1–30 · TRIAL MODE

Everything goes to drafts.

During the trial, **no reply is sent automatically.** Every classified message — A, B, or C — lands in your inbox as a prepared draft. You see exactly how the AI would respond, in your voice, for every type of reply.

You review, send what looks good, and flag anything that needs adjusting. We use that feedback to fine-tune the classification and reply quality in real-time.

AFTER TRIAL · LIVE MODE

Switch to auto — on your terms.

Once you're confident in the output quality, we flip categories A and B to auto-send. Category C always stays as a draft for your approval — that never changes.

You decide when you're ready. There's no pressure to switch before you're comfortable. And if you want to keep categories A or B in draft mode longer, that's completely fine too.

> *Trial length is flexible — 14 days if the volume is high and you feel ready, or a full 30 days at a more relaxed pace. Your call.*

FORECOM

REQUIREMENTS

What we need from you

Just two things. We handle Smartlead entirely — you don't need to touch it.

1

Email account access (one-time)

We connect your Microsoft 365 / Outlook account so the system can send auto-replies and create drafts on your behalf. This is a one-time OAuth authorisation — no password shared, revocable at any time from your account settings.

2

Examples of replies you've already sent

Forward us a handful of email threads where you personally replied to a campaign lead. We'll use these to calibrate the AI to your exact voice, tone, and style — so every auto-reply sounds like you wrote it.

FORECOM

TOOLS & INFRASTRUCTURE

No new tools.
One transparent cost.

Everything runs on Forecom's infrastructure. The only ongoing cost to you is the AI API usage — billed by actual consumption, not a flat subscription.

WHAT	WHO OWNS IT	COST TO YOU
Smartlead (55 accounts)	You already have it	€0 · existing
Your email (Microsoft 365 / Outlook)	You already have it	€0 · existing
Claude AI — Anthropic API (pay as you go)	Hosted by Forecom, billed to you	~$8–20 / month
Modal cloud hosting & webhook server	Forecom infrastructure	Included
Reply classification & draft generation logic	Forecom infrastructure	Included

How is $8–20/month calculated? Based on 20–50 replies/day (600–1,500/month). Each reply costs ~$0.013 in AI processing (Claude Sonnet, pay-per-token). You only pay for what's actually processed — if there are fewer replies, the cost is lower. Forecom passes through the exact Anthropic invoice with no markup.

FORECOM

INVESTMENT

Setup & delivery

A one-time build — no recurring platform cost from Forecom.

SETUP PACKAGE

10–14 hours

Forecom Agency

- Smartlead webhook integration & configuration
- AI classification logic for 3 reply categories
- Email account OAuth connection (Microsoft 365 / Outlook)
- Knowledge base setup — Glopos context, Tim's voice & tone
- End-to-end testing across all three reply categories
- Documentation & handover call

OPTIONAL ADD-ON

Monthly Monitoring & Maintenance

We review classification accuracy monthly, tune reply quality based on real thread outcomes, and update the knowledge base as Glopos evolves. Recommended for campaigns running 3+ months.

INCLUDED AT NO EXTRA COST

First 30-day quality review

After launch, we monitor the first 30 days of replies to verify classification accuracy and reply quality. Any tuning needed is included in the setup package.

FORECOM

NEXT STEPS

From approval to live in under a week

Once you give the green light, here's how we get it running.

01

Kickoff call

30 min. We collect your example replies and align on reply tone and Glopos knowledge base content.

02

OAuth setup

We send you an authorisation link. One click grants access. No password shared — revocable any time from your account settings.

03

Build & test

We build and test the full pipeline with sample replies across all three categories. You review the draft quality before anything goes live.

04

Go live

Webhook activated in Smartlead. System starts handling replies automatically. You receive your first priority draft notification within the day.
